

Report on Buruli ulcer cases

Reporting year: _____

Date: _____

Report for (tick one):

District: _____

Region: _____

Country: _____

Population:

1. Number of new and recurrent cases (analyzed by age, sex and place)

1.1 Total number of cases diagnosed in the reporting period

	Number	Number with limitation of movement at any joint at diagnosis
New cases	(a)	(b)
Recurrent cases		
Total	(c)	

1.2 Analyses by place

Communities	Number
Total number of villages reporting BU	
Number of new villages reporting in the year of report	
Number of previously known villages not reporting during the year of report	
Districts	
Total number of districts reporting BU in the year of report	
Number of new districts reporting in the year of report	
Number of previously known districts not reporting during the year of report	

1.3 Age and sex distribution (new cases only)

	<15 years	15–49 years	>49 years	Total
	Number	Number	Number	Number
Males				
Females				(d)
Total	(e)			(a)

2. Laboratory confirmation of cases (new and recurrent)

Of the total number of cases reported under #1.1:

	Number
Total number confirmed by ZN staining	
Total number confirmed by PCR	
Total number confirmed by Histology	
<i>Total number of cases for which confirmation was not possible</i>	
<i>Total number of cases confirmed by at least one method</i>	(f)

3. Analyses of clinical forms and categories out of the total number of new cases detected

	CAT I	CAT II	CAT III	TOTAL
	Number	Number	Number	Number
Non-ulcerative				
Ulcerative				(g)
TOTAL				(a)

Indicators

Indicator	Calculation	Result
1. New case detection rate	$\frac{a}{\text{Population}} \times 100,000$	
2. % of new cases with limitation of movement	$\frac{b}{a} \times 100$	
3. % of new cases under 15yrs	$\frac{e}{a} \times 100$	
4. % female amongst new cases	$\frac{d}{a} \times 100$	
5. % of all cases confirmed	$\frac{f}{c} \times 100$	
6. % ulcerated amongst new cases	$\frac{g}{a} \times 100$
